

BIRDS OF KENYA · TAXONOMY REVIEW

Taxonomy changes

Birds of Kenya, 2019.1 to 2026.0

Taxonomically ordered comparison of historical and current concepts

375 change groups

Struthioniformes

Ostriches Struthionidae

2019.1 Common Ostrich <i>Struthio camelus</i> (<i>race camelus</i>) avibase-2247CB05	1:1 →	2026.0 Common Ostrich <i>Struthio camelus</i> avibase-2247CB05
---	----------	--

Anseriformes

Ducks, Swans, and Geese Anatidae

2019.1 <i>None listed</i>	New Pending EARC →	2026.0 Cotton Pygmy Goose <i>Nettapus coromandelianus</i> avibase-90AAE188
2019.1 Hottentot Teal <i>Spatula hottentota</i> avibase-FA831F65	1:1 →	2026.0 Blue-billed Teal <i>Spatula hottentota</i> avibase-FA831F65
2019.1 Eurasian Teal <i>Anas crecca</i> avibase-BC6C3CCE	1:1 →	2026.0 Green-winged Teal <i>Anas crecca</i> avibase-BC6C3CCE
AviList taxonomy decision Taxon carolinensis is treated as a subspecies of <i>Anas crecca</i> based on high levels of introgression, coupled with a lack of known differences in courtship vocalization. Although mitochondrial DNA data show a relatively deep divergence between these taxa (Peters et al. 2012), a lack of genomic divergence (McLaughlin et al. 2020; Spaulding et al. 2023) indicates that male-mediated gene flow is extensive.		

Galliformes

Guineafowl Numididae

2019.1 Crested Guineafowl <i>Guttera pucherani</i> avibase-D5813CA4 Kenya Crested Guineafowl <i>Guttera pucherani pucherani</i> avibase-35D60F12 Crested Guineafowl <i>Guttera (pucherani) verreauxi</i> avibase-9D29C252	n:n →	2026.0 Eastern Crested Guineafowl <i>Guttera pucherani</i> avibase-35D60F12 Western Crested Guineafowl <i>Guttera verreauxi</i> avibase-9D29C252
AviList taxonomy decision Taxa edouardi (polytypic, including barbata) and verreauxi (polytypic) are treated as species separate from <i>Guttera pucherani</i> (monotypic) based on differences in plumage, eye color, and bare parts color. However, further research is needed including investigation of potential hybrid zones and formal bioacoustic analysis. Genetic data would also be informative.		

Partridges, Pheasants, Grouse, and Allies Phasianidae

2019.1 Coqui Francolin <i>Peliperdix coqui</i> avibase-ECD7C1D8	1:1 →	2026.0 Coqui Francolin <i>Campocolinus coqui</i> avibase-ECD7C1D8
2019.1 Elgon Francolin <i>Scleroptila elgonensis</i> (<i>race theresae</i>) avibase-3D25568A	1:1 →	2026.0 Elgon Francolin <i>Scleroptila elgonensis</i> avibase-3D25568A
AviList taxonomy decision		

Taxon *elgonensis* is treated as a monotypic species separate from *Scleroptila psilolaema* (monotypic) based on plumage, vocalizations, and genetics (Hunter et al. 2019; Turner et al. 2020).

2019.1

Archer's Francolin *Scleroptila gutturalis*
avibase-8E833C63

1:1

2026.0

Orange River Francolin *Scleroptila gutturalis*
avibase-8E833C63

2019.1

Shelley's Francolin *Scleroptila shelleyi* (race *macarthurii*) avibase-A15F6836

1:1

2026.0

Shelley's Francolin *Scleroptila shelleyi* avibase-A15F6836

AviList taxonomy decision

Taxon *whytei* is split from *Scleroptila shelleyi* based on plumage and genetics. Mitochondrial DNA data (Mandiwana-Neudani et al. 2019) indicate species-level divergence between these taxa but intra-generic relationships remain poorly resolved (Mandiwana-Neudani et al. 2019; Kimball et al. 2021).

2019.1

Crested Francolin *Dendroperdix sephaena*
avibase-8004C7E5

1:1

2026.0

Crested Francolin *Ortygornis sephaena* avibase-8004C7E5

2019.1

African Blue Quail *Synoicus adansonieae* avibase-CAA45AC6

1:1

2026.0

Blue Quail *Synoicus adansonii* avibase-CAA45AC6

2019.1

Common Quail *Coturnix coturnix* (race *coturnix*)
avibase-CAFE345D

1:1

2026.0

Common Quail *Coturnix coturnix* avibase-CAFE345D

2019.1

Chestnut-naped Francolin *Pternistis castaneicollis* (race *atrifrons*) avibase-81474844

1:1

2026.0

Chestnut-naped Spurfowl *Pternistis castaneicollis*
avibase-81474844

AviList taxonomy decision

Taxon *atrifrons* is treated as conspecific with *Pternistis castaneicollis* based on available evidence. Divergence in mitochondrial DNA and phenotypic traits (Töpfer et al. 2014) is more consistent with subspecies status in francolins (Bloomer & Crowe 1998).

2019.1

Jackson's Francolin *Pternistis jacksoni* avibase-A7E59764

1:1

2026.0

Jackson's Spurfowl *Pternistis jacksoni* avibase-A7E59764

2019.1

Hildebrandt's Francolin *Pternistis hildebrandti* avibase-F5A73AAA

1:1

2026.0

Hildebrandt's Spurfowl *Pternistis hildebrandti* avibase-F5A73AAA

2019.1

Scaly Francolin *Pternistis squamatus* avibase-1B11690B

1:1

2026.0

Scaly Spurfowl *Pternistis squamatus* avibase-1B11690B

Musophagiformes

Turacos Musophagidae

2019.1 Bare-faced Go-away-bird <i>Corythaixoides personatus</i> avibase-215428B0 Bare-faced (Brown-faced) Go-away-bird <i>Corythaixoides personatus personatus</i> avibase-71A552DA Bare-faced (Black-faced) Go-away-bird <i>Corythaixoides (personatus) leopoldi</i> avibase-BEDA5DA6	n:1 →	2026.0 Bare-faced Go-away-bird <i>Crinifer personatus</i> avibase-215428B0
AviList taxonomy decision Taxon leopoldi (monotypic) is treated as a subspecies of <i>Crinifer personatus</i> , as plumage differences are modest and variable within each taxon, and no behavioral or ecological differences have been identified; genetic data would be informative.		
2019.1 White-bellied Go-away-bird <i>Criniferoides leucogaster</i> avibase-2AA4BC58	1:1 →	2026.0 White-bellied Go-away-bird <i>Crinifer leucogaster</i> avibase-2AA4BC58
AviList taxonomy decision <i>Corythaixoides</i> and <i>Criniferoides</i> are placed in the genus <i>Crinifer</i> based on a combination of nuclear and mitochondrial DNA data (Veron & Winney 2000; Njabo & Sorenson 2009; Perktas et al. 2020).		
2019.1 Eastern Grey Plantain-eater <i>Crinifer zonurus</i> avibase-10B14696	1:1 →	2026.0 Eastern Plantain-eater <i>Crinifer zonurus</i> avibase-10B14696
AviList taxonomy decision <i>Corythaixoides</i> and <i>Criniferoides</i> are placed in the genus <i>Crinifer</i> based on a combination of nuclear and mitochondrial DNA data (Veron & Winney 2000; Njabo & Sorenson 2009; Perktas et al. 2020).		
2019.1 Ross's Turaco <i>Musophaga rossae</i> avibase-2C7BA3A6	1:1 →	2026.0 Ross's Turaco <i>Tauraco rossae</i> avibase-2C7BA3A6

Otidiformes

Bustards Otididae

2019.1 Denham's Bustard <i>Ardeotis denhami</i> avibase-4FDBC0CB	1:1 →	2026.0 Denham's Bustard <i>Neotis denhami</i> avibase-4FDBC0CB
2019.1 Heuglin's Bustard <i>Ardeotis heuglinii</i> avibase-4971D1EF	1:1 →	2026.0 Heuglin's Bustard <i>Neotis heuglinii</i> avibase-4971D1EF

Cuculiformes

Cuckoos Cuculidae

2019.1 White-browed Coucal <i>Centropus superciliosus</i> avibase-BD2BC35C	1:1 →	2026.0 White-browed Coucal <i>Centropus superciliosus</i> avibase-4B2A7A35
AviList taxonomy decision		

Taxon *burchellii* (polytypic, including *fasciipygialis*) is treated as a species separate from *Centropus superciliosus* based on plumage differences, supported by limited hybridization in areas of contact (Harrison et al. 1997). However, ecological and vocal differences have not been documented, suggesting further research is warranted.

2019.1
Southern Yellowbill (Green Malkoha)
Ceuthmochares australis avibase-3A46A20C

1:1

2026.0
Green Malkoha *Ceuthmochares australis*
avibase-3A46A20C

2019.1
Western Yellowbill (Blue Malkoha) *Ceuthmochares aereus* avibase-E0D521B7

1:1

2026.0
Blue Malkoha *Ceuthmochares aereus* avibase-E0D521B7

Columbiformes

Doves and Pigeons Columbidae

2019.1
None listed

New

2026.0
Vinaceous Dove *Streptopelia vinacea* avibase-DDEF7228

2019.1

2026.0
Blue-spotted Wood Dove *Turtur afer* avibase-23D5FC36

2019.1
Emerald-spotted Wood-Dove *Turtur chalcospilos*
avibase-BDF442F2

1:1

2026.0
Emerald-spotted Wood Dove *Turtur chalcospilos*
avibase-BDF442F2

Gruiformes

Cranes Gruidae

2019.1
Demoiselle Crane *Anthropoides virgo* avibase-64DDD14D

1:1

2026.0
Demoiselle Crane *Grus virgo* avibase-64DDD14D

AviList taxonomy decision

Anthropoides (polytypic) and *Bugeranus* (monotypic) are placed in the genus *Grus* based on available evidence. Analysis of complete mitochondrial genomes (Krajewski et al. 2010), and multilocus DNA data (Fain et al. 2007) failed to resolve basal relationships among these genera, indicating that they are best retained in an expanded *Grus* pending further research.

Rails, Gallinules, and Coots Rallidae

2019.1 African Water Rail <i>Rallus caerulescens</i> avibase-5B443EDE	1:1	2026.0 African Rail <i>Rallus caerulescens</i> avibase-5B443EDE
2019.1 African Crane <i>Crex egregia</i> avibase-09A0F2EB	1:1	2026.0 African Crane <i>Crecopsis egregia</i> avibase-09A0F2EB
AviList taxonomy decision Taxon egregia is placed in the monotypic genus Crecopsis based on nuclear and genomic DNA evidence of non-monophyly with <i>Crex crex</i> (Garcia-R et al. 2020; Kirchman et al. 2021).		
2019.1 Corncrake <i>Crex crex</i> avibase-7E257242	1:1	2026.0 Corn Crane <i>Crex crex</i> avibase-7E257242
2019.1 Lesser Moorhen <i>Gallinula angulata</i> avibase-A927C1AE	1:1	2026.0 Lesser Moorhen <i>Paragallinula angulata</i> avibase-A927C1AE
2019.1 Purple Swampphen <i>Porphyrio porphyrio</i> (race <i>madagascariensis</i>) avibase-865C039E	1:1	2026.0 Purple Swampphen <i>Porphyrio porphyrio</i> avibase-AC1E791E
AviList taxonomy decision The <i>Porphyrio porphyrio</i> complex is treated as a single polytypic species pending further research. Sometimes treated as six species based largely on mitochondrial-dominated DNA data (Sangster 1998; Garcia-R & Trewick 2015; Verry et al. 2023) that indicate deep divergences and paraphyly with respect to the two species of takahe, <i>P. mantelli</i> and <i>P. hochstetteri</i> . Available nuclear DNA data (Garcia-R & Trewick 2015) are mostly uninformative and mtDNA divergence times may be over-estimated. Further research incorporating denser sampling of nuclear DNA will be needed to determine species limits in this complex.		
2019.1 Striped Crane <i>Amaurornis marginalis</i> avibase-13967506	1:1	2026.0 Striped Crane <i>Aenigmatolimnas marginalis</i> avibase-13967506
AviList taxonomy decision Taxon <i>marginalis</i> is placed in the genus <i>Aenigmatolimnas</i> based on nuclear (Garcia-R et al. 2020) and genomic DNA (Kirchman et al. 2021) evidence. Formerly placed in <i>Amaurornis</i> , deep divergence combined with differences in morphology, ecology, and biogeography indicate that <i>marginalis</i> is best treated as a monotypic genus.		

Charadriiformes

Thick-knees and Stone-curlews Burhinidae

2019.1 Stone-curlew <i>Burhinus oedicephalus</i> avibase-C7DB323E	1:1	2026.0 Eurasian Stone-curlew <i>Burhinus oedicephalus</i> avibase-C7DB323E
---	-----	--

Plovers and Lapwings Charadriidae

2019.1 Three-banded Plover <i>Charadrius tricollaris</i> avibase-8DAF86A1	1:1	2026.0 Three-banded Plover <i>Thinornis tricollaris</i> avibase-8DAF86A1
AviList taxonomy decision		

Taxon *bifrontatus* is treated as a subspecies of *Thinornis tricoloris* based on available evidence. Although the two taxa differ in plumage and mitochondrial DNA (Dos Remedios et al. 2020) the levels are more consistent with subspecific differentiation. A more comprehensive analysis based on genomic DNA may be informative.

2019.1
Little Ringed Plover *Charadrius dubius* avibase-35EC3BBF

1:1

2026.0
Little Ringed Plover *Thinornis dubius* avibase-35EC3BBF

avibase-881C954D

2019.1
Caspian Plover *Charadrius asiaticus* avibase-264D0351

1:1

2026.0
Caspian Plover *Anarhynchus asiaticus* avibase-264D0351

2019.1 Lesser Sand Plover <i>Charadrius mongolus</i> avibase-66DA1FB3	1:1 →	2026.0 Tibetan Sand Plover <i>Anarhynchus atrifrons</i> avibase-828D3D5A
AviList taxonomy decision Taxon atrifrons (polytypic, including pamirensis and schaeferi) is treated as a species separate from Anarhynchus mongolus based on genomic DNA data, supported by vocalizations (Wei et al. 2022a).		
2019.1 Greater Sand Plover <i>Charadrius leschenaultii</i> avibase-98B9C10B	1:1 →	2026.0 Greater Sand Plover <i>Anarhynchus leschenaultii</i> avibase-98B9C10B
2019.1 Kittlitz's Plover <i>Charadrius pecuarius</i> avibase-0F0DCC2F	1:1 →	2026.0 Kittlitz's Plover <i>Anarhynchus pecuarius</i> avibase-0F0DCC2F
2019.1 Chestnut-banded Plover <i>Charadrius pallidus</i> (race <i>venustus</i>) avibase-61F0E581	1:1 →	2026.0 Chestnut-banded Plover <i>Anarhynchus pallidus</i> avibase-61F0E581
2019.1 White-fronted Plover <i>Charadrius marginatus</i> avibase-214B3533	1:1 →	2026.0 White-fronted Plover <i>Anarhynchus marginatus</i> avibase-214B3533
2019.1 Kentish Plover <i>Charadrius alexandrinus</i> avibase-AA4385A2	1:1 →	2026.0 Kentish Plover <i>Anarhynchus alexandrinus</i> avibase-AA4385A2
AviList taxonomy decision Taxon seebohmi is treated as a subspecies of Anarhynchus alexandrinus, as the evidentiary basis for a split is weak. Vocal differences between seebohmi and alexandrinus have not been documented; there are only minor morphometric differences between the two (Niroshan et al. 2023), for which clinal variation has not been ruled out; mitochondrial DNA divergence is negligible, and there is no support for seebohmi as the earliest-diverged lineage in this complex (Niroshan et al. 2023).		

Sandpipers and Allies Scolopacidae

2019.1 Whimbrel <i>Numenius phaeopus</i> avibase-F9305BAA	1:1 →	2026.0 Eurasian Whimbrel <i>Numenius phaeopus</i> avibase-082F3A63
AviList taxonomy decision Taxon hudsonicus (polytypic, including rufiventris) is treated as a species separate from Numenius phaeopus based on morphology and deep genomic DNA divergence (McLaughlin et al. 2020; Tan et al. 2023). However, vocalizations seem similar, and a formal bioacoustic analysis is lacking.		
2019.1 Pintail Snipe <i>Gallinago stenura</i> avibase-EE61E2CA	1:1 →	2026.0 Pin-tailed Snipe <i>Gallinago stenura</i> avibase-EE61E2CA
2019.1 Grey Phalarope <i>Phalaropus fulicarius</i> avibase-18A19380	1:1 →	2026.0 Red Phalarope <i>Phalaropus fulicarius</i> avibase-18A19380

Buttonquail Turnicidae

2019.1 Black-rumped Buttonquail <i>Turnix hottentottus</i> avibase-0874B4D5	1:1 →	2026.0 Black-rumped Buttonquail <i>Turnix nanus</i> avibase-0874B4D5
--	----------	---

Coursers and Pratincoles Glareolidae

2019.1 Double-banded Courser <i>Rhinoptilus africanus</i> avibase-C130193B	1:1 →	2026.0 Double-banded Courser <i>Smutornis africanus</i> avibase-C130193B
AviList taxonomy decision Taxon africanus is placed in the monotypic genus Smutsornis based on multilocus DNA data (Černý & Natale 2022), supported by differences in behavior, downy chick patterning, and syringeal structure (Brown & Ward 1990).		

2019.1 Heuglin's Courser <i>Rhinoptilus cinctus</i> avibase-29D50ED5	1:1 →	2026.0 Three-banded Courser <i>Rhinoptilus cinctus</i> avibase-29D50ED5
--	----------	--

2019.1 Cream-coloured Courser <i>Cursorius cursor</i> avibase-DE0A72A7	1:1 →	2026.0 Cream-colored Courser <i>Cursorius cursor</i> avibase-DE0A72A7
--	----------	---

Jaegers and Skuas Stercorariidae

2019.1 Arctic Skua <i>Stercorarius parasiticus</i> avibase-39086887	1:1 →	2026.0 Parasitic Jaeger <i>Stercorarius parasiticus</i> avibase-39086887
---	----------	--

2019.1 Long-tailed Skua <i>Stercorarius longicaudus</i> avibase-1D446440	1:1 →	2026.0 Long-tailed Jaeger <i>Stercorarius longicaudus</i> avibase-1D446440
---	----------	---

2019.1 Pomarine Skua <i>Stercorarius pomarinus</i> avibase-7CB8F5B7	1:1 →	2026.0 Pomarine Jaeger <i>Stercorarius pomarinus</i> avibase-7CB8F5B7
---	----------	--

Skimmers, Noddies, Terns, and Gulls Laridae

2019.1 Little Tern <i>Sternula albifrons</i> avibase-943CDEAC Little Tern <i>Sternula (albifrons) albifrons</i> avibase-17310BF0 Saunders's Tern <i>Sternula (albifrons) saundersi</i> avibase-4B21F4D8	n:1 →	2026.0 Little Tern <i>Sternula albifrons</i> avibase-17310BF0
--	----------	---

2019.1 Western Reef Egret <i>Egretta (garzetta) gularis</i> avibase-DF32B1F9	1:1 →	2026.0 Western Reef Heron <i>Egretta gularis</i> avibase-DF32B1F9
--	----------	---

AviList taxonomy decision

Taxon dimorpha is treated as a subspecies of *Egretta garzetta* (polytypic, including Australasian immaculata) based on available evidence. Sometimes split as a separate species, or treated as a subspecies of *gularis*, based largely on the presence of a dark morph, the bare parts color and bill form suggest that dimorpha is better treated as a subspecies of *E. garzetta*. Furthermore, the name *nigripes* is considered invalid (*nigripes*=*immaculata*) as some syntypes appear to be of hybrid origin, and phenotypic intermediacy suggests widespread intergradation between *garzetta* and *immaculata* in the Sundaic region.

2019.1 Little Egret <i>Egretta garzetta</i> avibase-F2858F9F Dimorphic Egret <i>Egretta (garzetta) dimorpha</i> avibase-7C15B36B	n:1 →	2026.0 Little Egret <i>Egretta garzetta</i> avibase-F2858F9F
--	----------	--

AviList taxonomy decision

Taxon dimorpha is treated as a subspecies of *Egretta garzetta* (polytypic, including Australasian immaculata) based on available evidence. Sometimes split as a separate species, or treated as a subspecies of *gularis*, based largely on the presence of a dark morph, the bare parts color and bill form suggest that dimorpha is better treated as a subspecies of *E. garzetta*. Furthermore, the name *nigripes* is considered invalid (*nigripes*=*immaculata*) as some syntypes appear to be of hybrid origin, and phenotypic intermediacy suggests widespread intergradation between *garzetta* and *immaculata* in the Sundaic region.

2019.1 Striated Heron <i>Butorides striata</i> avibase-36DF115B	1:1 →	2026.0 Little Heron <i>Butorides atricapilla</i> avibase-7085B8A0
---	----------	---

AviList taxonomy decision

Four species are recognized in the *Butorides striata* complex based on the genomic DNA evidence of Mendales (2023): monotypic *B. sundevalli* from Galapagos; polytypic *B. virescens* from North America; monotypic *B. striata* from South America; and a polytypic Old World *B. atricapilla* group. While further splits in the *B. atricapilla* group may be warranted, genetic sampling was too geographically limited to properly assess these; further research needed.

2019.1 Madagascar Pond Heron <i>Ardeola idae</i> avibase-EA2C460A	1:1 →	2026.0 Malagasy Pond Heron <i>Ardeola idae</i> avibase-EA2C460A
2019.1 Great White Egret <i>Ardea alba</i> avibase-49D9148A	1:1 →	2026.0 Great Egret <i>Ardea alba</i> avibase-49D9148A
2019.1 Yellow-billed Egret <i>Egretta intermedia</i> avibase-C3ABF863	1:1 →	2026.0 Yellow-billed Egret <i>Ardea brachyrhyncha</i> avibase-C3ABF863
AviList taxonomy decision Three monotypic species are recognized in the <i>Ardea intermedia</i> sensu lato complex based on differences in breeding bare parts color, plumage, and morphology, and possibly in display and vocalizations: <i>A. intermedia</i> ; <i>A. brachyrhyncha</i> ; and <i>A. plumifera</i> . However, genetic data are lacking and further work is needed to corroborate this split.		
2019.1 Cattle Egret <i>Bubulcus ibis</i> avibase-AB1CB216	1:1 →	2026.0 Western Cattle Egret <i>Ardea ibis</i> avibase-AB1CB216
AviList taxonomy decision 2025-0902)) Taxon coromanda is treated as a species separate from <i>Ardea ibis</i> based on consistent differences in proportions and breeding plumage. A comprehensive genetic review is needed. 2025-1187)) <i>Bubulcus</i> is merged into <i>Ardea</i> based on the genomic DNA evidence of Hruska et al. (2023).		

Caprimulgiformes

Nightjars and Nighthawks Caprimulgidae

2019.1 Pennant-winged Nightjar <i>Macrodipteryx vexillarius</i> avibase-A526534E	1:1 →	2026.0 Pennant-winged Nightjar <i>Caprimulgus vexillarius</i> avibase-A526534E
2019.1 Standard-winged Nightjar <i>Macrodipteryx longipennis</i> avibase-D36F4D98	1:1 →	2026.0 Standard-winged Nightjar <i>Caprimulgus longipennis</i> avibase-D36F4D98
2019.1 Eurasian Nightjar <i>Caprimulgus europaeus</i> avibase-80D4B0FE	1:1 →	2026.0 European Nightjar <i>Caprimulgus europaeus</i> avibase-80D4B0FE
AviList taxonomy decision <i>Caprimulgus centralasicus</i> is a synonym of <i>C. europaeus</i> based on genetic analysis of the holotype (and sole specimen) (Schweizer et al. 2020a). It probably represents an example of subspecies plumipes but cannot be assigned with confidence based on available morphological and genetic data.		
2019.1 Dusky Nightjar <i>Caprimulgus fraenatus</i> avibase-E93A0F33	1:1 →	2026.0 Sombre Nightjar <i>Caprimulgus fraenatus</i> avibase-E93A0F33

2019.1 Fiery-necked Nightjar <i>Caprimulgus pectoralis</i> avibase-7E3578A2 Fiery-necked Nightjar <i>Caprimulgus pectoralis</i> avibase-62ED1974 Black-shouldered Nightjar <i>Caprimulgus (pectoralis) nigriscapularis</i> avibase-AB8E1D95	n:1 →	2026.0 Fiery-necked Nightjar <i>Caprimulgus pectoralis</i> avibase-7E3578A2
--	-----------------------------	--

AviList taxonomy decision

Taxon nigriscapularis is treated as a subspecies of *Caprimulgus pectoralis* due to overlap in vocalizations (Dowsett & Dowsett-Lemaire 1993) and morphometrics (Jackson 2013), and minimal plumage differences (Louette 1990). Limited genetic data confirm monophyly of this group, with nigriscapularis as the most divergent lineage (Han et al. 2010); due to limited genomic sampling and potential mitochondrial DNA introgression, further genetic studies are desirable.

2019.1 Gabon Nightjar <i>Caprimulgus fossii</i> avibase-4FD242D0	1:1 →	2026.0 Square-tailed Nightjar <i>Caprimulgus fossii</i> avibase-4FD242D0
---	-----------------------------	---

Strigiformes

Bay Owls and Barn Owls Tytonidae

2019.1 (African) Grass Owl <i>Tyto capensis</i> avibase-B21A37E7	1:1 →	2026.0 African Grass Owl <i>Tyto capensis</i> avibase-B21A37E7
---	-----------------------------	---

2019.1 Barn Owl <i>Tyto alba</i> avibase-FEE35F4C	1:1 →	2026.0 Western Barn Owl <i>Tyto alba</i> avibase-CFD6F275
--	-----------------------------	--

AviList taxonomy decision

Tyto alba sensu lato is split into three polytypic species (*T. furcata*, *T. javanica*, and *T. alba*) based on genetics (Aliabadian et al. 2016; Uva et al. 2018) and vocalizations (Robb 2015). Mitochondrial-dominated DNA data (Uva et al. 2018) also placed *T. glaucops* within the *furcata* group, while *T. nigrobrunnea* and *T. rosenbergii* resolved as part of the *javanica* group; genomic data are needed to better understand species relationships in this complex.

Owls Strigidae

2019.1 Northern White-faced (Scops) Owl <i>Ptilopsis leucotis</i> avibase-E561A180	1:1 →	2026.0 Northern White-faced Owl <i>Ptilopsis leucotis</i> avibase-E561A180

AviList taxonomy decision Taxon <i>aegyptius</i> (polytypic, including <i>parasitus</i>) is treated as conspecific with <i>Milvus migrans</i> pending further research. Although the <i>aegyptius</i> complex is morphologically distinctive, mitochondrial DNA data (Johnson et al. 2005; Andreyenkova et al. 2021) do not recover the group as monophyletic, and geographic patterns do not align with currently recognized subspecies. All taxa are retained within a single species until more comprehensive nuclear or genomic data are available.		
2019.1 African Fish Eagle <i>Haliaeetus vocifer</i> avibase-A19B0CF4	1:1 →	2026.0 African Fish Eagle <i>Ichthyophaga vocifer</i> avibase-A19B0CF4
2019.1 Common Buzzard <i>Buteo buteo</i> avibase-3C0C325D (Common) Steppe Buzzard <i>Buteo buteo (race vulpinus)</i> avibase-02AD152F	n:1 →	2026.0 Common Buzzard <i>Buteo buteo</i> avibase-3C0C325D
AviList taxonomy decision Taxon <i>bannermani</i> (monotypic) is treated as a subspecies of <i>Buteo buteo</i> (polytypic) based on available evidence. Size-related characters clearly align <i>bannermani</i> with <i>B. buteo</i> , but plumage characters are highly variable and largely uninformative (Kruckenhauser et al. 2004). Conversely, limited		

mitochondrial DNA data align *bannermani* with *B. rufinus* (Clouet & Wink 2000; Kruckenhauser et al. 2004) and there is evidence of genetic introgression within *B. buteo* and related species (Jowers et al. 2019); further research needed.

avibase-75DF194C

1:1

2026.0

Eastern Yellow-billed Barbet *Trachylaemus purpuratus*

avibase-80BC978E

AviList taxonomy decision

Taxon goffinii (polytypic, including togoensis) is treated as a species separate from *Trachylaemus purpuratus* based on plumage, facial bare parts color, and genetics. Deep mitochondrial DNA divergence (Moyle 2004) supports recognition of an eastern (purpuratus) and western clade but it is unclear if the western sample represented goffinii or togoensis. Pending further genetic research incorporating broader taxon sampling, togoensis is treated as a subspecies of *T. goffinii*.

D'Arnaud's Barbet *Trachyphonus darnaudii*

avibase-E6D52EF7

Usambiro Barbet *Trachyphonus (darnaudii) usambiro*

avibase-55E9B668

AviList taxonomy decision

Trachyphonus darnaudii is treated as a single polytypic species based on available evidence. Taxa usambiro and emini sometimes treated as separate species but plumage and morphological differences are relatively modest. Furthermore, although usambiro is vocally distinct, and possibly allopatric, behavioral responses led Short & Horne (1985a) to recognize a single species in this complex. Mitochondrial DNA data are limited (Barker & Lanyon 2000; Moyle 2004; Brown et al. 2008) and a more thorough analysis of morphology, vocalizations and genetics would be informative.

African Barbets Lybiidae

2019.1 Grey-throated (Grey-headed) Barbet <i>Gymnobucco bonapartei</i> (race <i>cinereiceps</i>) avibase-95054CA5	1:1 →	2026.0 Grey-throated Barbet <i>Gymnobucco bonapartei</i> avibase-95054CA5
AviList taxonomy decision Taxon <i>cinereiceps</i> (monotypic) is treated as a subspecies of <i>Gymnobucco bonapartei</i>, as the evidentiary basis for a split is weak. The distributions of <i>bonapartei</i> and <i>cinereiceps</i> appear to be continuous, with a cline of increasing size eastwards, and a broad hybrid zone. Although differences in iris color occur (Chapin 1939) there is no evidence of behavioral, ecological, or genetic differences to support species status.		
2019.1 Yellow-rumped Tinkerbird <i>Pogoniulus bilineatus</i> avibase-7749C92B Lemon-rumped Tinkerbird <i>Pogoniulus leucolaimus</i> avibase-6B28B3A1 Fischer's (Coastal) Tinkerbird <i>Pogoniulus fischeri</i> avibase-35C11126	n:1 →	2026.0 Yellow-rumped Tinkerbird <i>Pogoniulus bilineatus</i> avibase-7749C92B
AviList taxonomy decision Taxon <i>makawai</i> is treated as a synonym of <i>Pogoniulus bilineatus</i> based on analysis of mitochondrial and nuclear DNA (Kirschel et al. 2018). Although plumage differences are striking, the single specimen of <i>makawai</i> is embedded within <i>P. bilineatus</i> suggesting that it is an aberrant color-morph; field observations have also failed to locate additional individuals of <i>makawai</i> (Dowsett et al. 2008).		
2019.1 Red-fronted Tinkerbird <i>Pogoniulus pusillus</i> avibase-A4CF3B9E	1:1 →	2026.0 Northern Red-fronted Tinkerbird <i>Pogoniulus uropygialis</i> avibase-E01F4BD7
AviList taxonomy decision Taxon <i>uropygialis</i> (polytypic, including <i>affinis</i>) is treated as a species separate from <i>Pogoniulus pusillus</i> based on Kirschel et al. (2021).		
2019.1 Brown-breasted Barbet <i>Pogonornis melanopterus</i> avibase-724266B4	1:1 →	2026.0 Brown-breasted Barbet <i>Pogonornis melanopterus</i> avibase-724266B4
2019.1 Double-toothed Barbet <i>Pogonornis bidentatus</i> avibase-439FE608	1:1 →	2026.0 Double-toothed Barbet <i>Pogonornis bidentatus</i> avibase-439FE608
2019.1 White-headed Barbet <i>Lybius leucocephalus</i> avibase-BCA0F974 White-headed Barbet <i>Lybius leucocephalus leucocephalus/albicauda</i> avibase-408639E6 Snowy (Brown-and-white) Barbet <i>Lybius (leucocephalus) senex</i> avibase-B91DD3C8	n:1 →	2026.0 White-headed Barbet <i>Lybius leucocephalus</i> avibase-BCA0F974
AviList taxonomy decision The monotypic taxa <i>leucogaster</i> and <i>senex</i> are treated as subspecies of <i>Lybius leucocephalus</i> based on available evidence. Although sometimes split as separate species, plumage differences seem modest, ecologically the taxa are similar, and subspecies <i>senex</i> and <i>albicauda</i> are reported to interbreed (Short & Horne 1985a). Further evidence may show that the geographically isolated subspecies <i>leucogaster</i> warrants separation; further research needed.		

Honeyguides Indicatoridae

2019.1 Wahlberg's Honeybird <i>Prodotiscus regulus</i> avibase-8DB3F1A2	1:1 →	2026.0 Brown-backed Honeybird <i>Prodotiscus regulus</i> avibase-8DB3F1A2
--	---------------------	--

2019.1 Lesser Honeyguide <i>Indicator minor</i> avibase-50F3668C Lesser Honeyguide <i>Indicator minor</i> avibase-E9ED7248 Thick-billed Honeyguide <i>Iindicator (minor)</i> <i>conirostris</i> avibase-0AC6CF82	n:1 →	2026.0 Lesser Honeyguide <i>Indicator minor</i> avibase-50F3668C
--	-----------------------------	---

AviList taxonomy decision

Taxon conirostris (polytypic, including ussheri) is treated as conspecific with Indicator minor based on the lack of clear-cut ecological, vocal, and plumage differences. Vocalizations appear to be indistinguishable (Short & Horne 1985b), reports of sympatric breeding (Friedmann 1969) have not been substantiated, and genetic data (Sonet et al. 2011) are uninformative; further research needed.

Woodpeckers Picidae

2019.1 Fine-banded Woodpecker <i>Campethera taeniolaema</i> <i>(race hausbergi)</i> avibase-D0A5FADB	1:1 →	2026.0 Fine-banded Woodpecker <i>Campethera taeniolaema</i> avibase-D0A5FADB
--	-----------------------------	--

AviList taxonomy decision

Taxon taeniolaema (polytypic, including hausburgi) is treated as a species separate from Campethera tullbergi based on pronounced differences in underparts plumage, supported by divergence in nuclear and mitochondrial DNA (Fuchs et al. 2017a). Vocalizations are poorly known and a formal bioacoustic analysis may be informative.

2019.1 Green-backed Woodpecker <i>Campethera cailliautii</i> avibase-BD7C4F70	1:1 →	2026.0 Green-backed Woodpecker <i>Campethera maculosa</i> avibase-BD7C4F70
---	-----------------------------	--

AviList taxonomy decision

Taxa permista and cailliautii (polytypic) are treated as conspecific with Campethera maculosa based on available evidence. Sometimes treated as two or three species based on plumage, taxon permista is only weakly differentiated from maculosa and hybridizes with the phenotypically distinctive cailliautii (Chapin 1952; Prigogine 1987). Divergence in nuclear and mitochondrial DNA (Fuchs et al. 2017a) is modest, and vocalizations of all seem similar, suggesting they are best treated as conspecific pending further research.

2019.1 Reichenow's (Speckle-throated) Woodpecker <i>Campethera scriptoricauda</i> avibase-C5585051	1:1 →	2026.0 Speckle-throated Woodpecker <i>Campethera scriptoricauda</i> avibase-C5585051
--	-----------------------------	---

2019.1 Yellow-crested Woodpecker <i>Chloropicos xantholophus</i> avibase-2700C97D	1:1 →	2026.0 Yellow-crested Woodpecker <i>Chloropicus xantholophus</i> avibase-2700C97D
--	-----------------------------	--

2019.1 Bearded Woodpecker <i>Chloropicos namaquus</i> avibase-77D82F60	1:1 →	2026.0 Bearded Woodpecker <i>Chloropicus namaquus</i> avibase-77D82F60
--	-----------------------------	--

2019.1 Brown-backed Woodpecker <i>Mesopicus obsoletus</i> avibase-9FF4EDB5	1:1 →	2026.0 Brown-backed Woodpecker <i>Dendropicos obsoletus</i> avibase-9FF4EDB5
--	-----------------------------	--

2019.1 African Grey Woodpecker <i>Mesopicus goertae</i> avibase-E5DF48FC	1:1 →	2026.0 African Grey Woodpecker <i>Dendropicos goertae</i> avibase-E5DF48FC
---	-----------------------------	--

2019.1 Eastern Grey (Grey-headed) Woodpecker <i>Mesopicus spodocephalus</i> avibase-902E9F69	1:1 →	2026.0 Eastern Grey Woodpecker <i>Dendropicos spodocephalus</i> avibase-902E9F69
--	-----------------------------	---

Falconiformes

Falcons and Caracaras Falconidae

2019.1 Common Kestrel <i>Falco tinnunculus</i> avibase-2DAB45B8 Common Kestrel <i>Falco tinnunculus tinnunculus</i> avibase-A76838A0 Rock Kestrel <i>Falco (tinnunculus) rufescens</i> avibase-2BD7F8B5	n:1 →	2026.0 Common Kestrel <i>Falco tinnunculus</i> avibase-2DAB45B8
AviList taxonomy decision Taxon rupicolus is split from <i>Falco tinnunculus</i> based on genetics (Groombridge et al. 2002; Fuchs et al. 2015) and plumage. Inclusion of rupicolus in <i>F. tinnunculus</i> renders that species polyphyletic based on nuclear and mitochondrial DNA (Fuchs et al. 2015). Taxon rupicolus also shows reduced sexual dichromatism compared to most subspecies, but additional genetic research is needed to resolve the status of other forms within the <i>F. tinnunculus</i> complex, particularly neglectus and alexandri.		
2019.1 Red-necked Falcon <i>Falco chiquera</i> avibase-6A64EFCB	1:1 →	2026.0 Red-necked Falcon <i>Falco chicquera</i> avibase-6A64EFCB
AviList taxonomy decision The African taxa ruficollis and horsbrughii sometimes are split from Asian nominate <i>Falco chicquera</i> (e.g., del Hoyo & Collar 2014) but the evidentiary basis for a split is considered weak. Differences in plumage are relatively minor and mitochondrial DNA data (Wink & Sauer-Gürth 2000, 2004) are more consistent with subspecies level divergence. Documentation of ecological differences and genomic data might add greater perspective to this proposed split.		
2019.1 Peregrine Falcon <i>Falco peregrinus</i> avibase-47E58408 Peregrine Falcon <i>Falco peregrinus</i> avibase-B46C6125 Barbary Falcon <i>Falco (peregrinus) pelegrinoides</i> avibase-A113792C	n:1 →	2026.0 Peregrine Falcon <i>Falco peregrinus</i> avibase-47E58408

Psittaciformes

Wattle-eyes and Batises Platysteiridae

2019.1	1:1	2026.0
Jameson's Wattle-eye <i>Dyaphorophya jamesoni</i> avibase-7DC78D7A	→	Jameson's Wattle-eye <i>Platysteira jamesoni</i> avibase-7DC78D7A

2019.1	1:1	2026.0
Yellow-bellied Wattle-eye <i>Dyaphorophya concreta</i> avibase-3B66D504	→	Yellow-bellied Wattle-eye <i>Platysteira concreta</i> avibase-3B66D504

AviList taxonomy decision

Taxon ansorgei is retained as a subspecies of *Platysteira concreta* pending further investigation. Considerable variation in plumage (Harris & Franklin 2000) occurs within *P. concreta* sensu lato, but a more comprehensive analysis of behavior and vocalizations is required. While mitochondrial DNA analyses have identified some deep divergences within the complex (Njabo et al. 2008; Fuchs et al. 2004; Erard et al. 2019), taxon sampling is incomplete, making any splits premature.

2019.1	1:1	2026.0
Forest Batis <i>Batis mixta</i> avibase-D91540DE	→	Short-tailed Batis <i>Batis mixta</i> avibase-D91540DE

AviList taxonomy decision

Taxon reichenowi is retained as a subspecies of *Batis mixta* based on genetic evidence and reassessment of plumages following Fjeldså et al. (2006). Plumages within this complex are variable and mitochondrial DNA data showed *reichenowi* nested within *B. mixta*; genomic and vocal evidence would be needed to justify a split.

2019.1	1:1	2026.0

Drongos Dicruridae

2019.1

Sharpe's Square-tailed Drongo *Dicrurus sharpei*
avibase-84249EE3

1:1

2026.0

Sharpe's Drongo *Dicrurus sharpei* avibase-84249EE3

AviList taxonomy decision

Taxon *sharpei* (polytypic, including *occidentalis*) is treated as a species separate from *Dicrurus ludwigii* based on analysis of plumage, proportions, and vocalizations (Fishpool et al. 2021), and genetics. Mitochondrial DNA data (Fuchs et al. 2017b, 2018b) do not recover *D. ludwigii sensu lato* as monophyletic, with *sharpei* being more closely aligned to *D. atripennis*. Although a relatively deep mtDNA divergence separates *sharpei* and *occidentalis* (Fuchs et al. 2018b) they are treated as conspecific pending further research.

2019.1

Fork-tailed (Common) Drongo *Dicrurus adsimilis*
avibase-11FE7313

n:1

2026.0

Fork-tailed Drongo *Dicrurus adsimilis* avibase-11FE7313

Glossy-backed (Northern) Drongo *Dicrurus divaricatus*
avibase-7763FEC8

AviList taxonomy decision

Taxon *divaricatus* (polytypic, including *lugubris*) is treated as conspecific with *Dicrurus adsimilis* based on available evidence. Phenotypic differences are not pronounced (shade of plumage gloss, and length of wing and tail fork), and nuclear DNA data (Fuchs et al. 2018a) recover them as monophyletic. Earlier suggestions of non-monophyly based on a short section of mitochondrial DNA (Fuchs et al. 2017b) appear to be the result of mitochondrial DNA capture in *divaricatus* west of Lake Chad.

AviList taxonomy decision Taxa gilletti (polytypic) and rufa (polytypic) are placed in the genus Calendulauda, rather than Mirafrā, based on the multilocus and genomic DNA of Alström et al. (2023).		
2019.1 Fawn-coloured Lark <i>Calendulauda africanoides</i> avibase-A990EB0B	1:1 →	2026.0 Fawn-colored Lark <i>Calendulauda africanoides</i> avibase-A990EB0B
AviList taxonomy decision Taxon alopec (polytypic) is treated as a subspecies of Calendulauda africanoides (polytypic) based on available evidence. Mitochondrial DNA divergence is relatively weak (Alström et al. 2013), as are differences in morphology (Donald & Alström 2024).		
2019.1 <i>None listed</i>	New Pending EARC →	2026.0 Melodious Lark <i>Mirafrā cheniana</i> avibase-AB507233
2019.1 Singing Bush Lark <i>Mirafrā cantillans</i> avibase-6B089785	1:1 →	2026.0 Singing Bush Lark <i>Mirafrā javanica</i> avibase-5BFC242D
AviList taxonomy decision Taxon cantillans (polytypic) is treated as conspecific with Mirafrā javanica (polytypic) based on genetics. Although the two have been recovered as monophyletic clades (Alström et al. 2013), mitochondrial DNA divergence is modest, and diagnostic plumage traits are lacking (Donald & Alström in press).		
2019.1 Collared Lark <i>Mirafrā collaris</i> avibase-D0EAD8A3	1:1 →	2026.0 Collared Lark <i>Amirafrā collaris</i> avibase-D0EAD8A3
2019.1 Flappet Lark <i>Mirafrā rufocinnamomea</i> avibase-C49FA9A8	1:1 →	2026.0 Flappet Lark <i>Amirafrā rufocinnamomea</i> avibase-C49FA9A8
2019.1 Rufous-naped Lark <i>Mirafrā africana</i> (race harterti) avibase-6A0D6123	1:1 →	2026.0 Rufous-naped Lark <i>Corypha africana</i> avibase-EB9CE6A2
AviList taxonomy decision 2025-0218)) Taxon sharpii is treated as a monotypic species separate from Corypha africana based on genetics. Mitochondrial-dominated DNA (Alström et al. 2023) and genome-wide data (Alström et al. 2024) indicate that C. africana sensu lato is not monophyletic, with sharpii forming a deeply divergent clade along with C. hypermetra and C. somalica. Differences in plumage and proportions (Donald & Alström 2024) also support species recognition for sharpii. 2025-1204)) Five new polytypic species are recognized in the genus Corypha based on an integrative study of plumage, morphometrics, vocalizations, and genetics (Alström et al. 2023): C. kidepoensis (including kathangorensis) is treated as a species separate from C. hypermetra (polytypic, including gallarum); C. athi (including harterti); C. nigrescens (including nyikae); C. kabalii (including irwini and malbranti); and C. kurrae (including bamendae, batesi, henrici, and stresemanni) are treated as species separate from C. africana. Taxon irwini is poorly known, and sometimes synonymized		

with *C. africana gomesi*. However, based on analysis of specimens (n=2) there are clear differences from a specimen of *gomesi* (and the type description), and the one *irwini* that has been analysed genetically was found to be very closely related to *kabalii* and *malbranti* (although *gomesi* has yet to be analysed genetically).

2019.1

Red-winged Lark *Mirafra hypermetra* avibase-BAA83B0C

1:n

2026.0

Sentinel Lark *Corypha athi* avibase-D167A312

Red-winged Lark *Corypha hypermetra* avibase-5F213A7D

AviList taxonomy decision

Five new polytypic species are recognized in the genus *Corypha* based on integrative analysis of morphology (including plumage), vocalizations, and genetics (Alström et al. 2023, 2024): *C. kidepoensis* (including *kathangorensis*) is treated as a species separate from *C. hypermetra* (polytypic, including *gallarum*); *C. athi* (including *harterti*), *C. nigrescens* (including *nyikae*), *C. kabalii* (including *irwini* and *malbranti*), and *C. kurrae* (including *bamendae*, *batesi*, *henrici*, and *stresemanni*) are treated as species separate from *C. africana*. Taxon *irwini* is poorly known, and sometimes synonymized with *C. africana gomesi*. However, based on analysis of specimens (n=2) there are clear differences from a specimen of *gomesi* (and the type description), and the one *irwini* that has been analysed genetically was found to be very closely related to *kabalii* and *malbranti* (although *gomesi* has yet to be analysed genetically).

2019.1 Grey-backed Camaroptera <i>Camaroptera brachyura</i> avibase-DC456636	1:1 →	2026.0 Bleating Camaroptera <i>Camaroptera brachyura</i> avibase-DC456636
AviList taxonomy decision The polytypic brevicaudata group is retained in <i>Camaroptera brachyura</i> based on present evidence. Sometimes split based on plumage and habitat differences, the grey-backed brevicaudata group and green-backed brachyura group are vocally similar (Dowsett & Dowsett-Lemaire 1980), and hybridize in areas of contact (White 1962; Zimmerman et al. 2001). Available mitochondrial DNA data (Nguembock et al. 2007) identified deep divergences between brevicaudata, harterti, and brachyura, but further research is needed to define species limits in this group.		
2019.1 Taita Apalis <i>Apalis (thoracica) fuscigularis</i> avibase-D5549C6D	1:1 →	2026.0 Taita Apalis <i>Apalis fuscigularis</i> avibase-D5549C6D
2019.1 Yellow-breasted Apalis <i>Apalis flavida</i> avibase-E70F9747 Yellow-breasted Apalis <i>Apalis flavida (race pugnax)</i> avibase-CA02C9A1 Brown-tailed Apalis <i>Apalis (flavida) flavocincta</i> avibase-8C13DA6F	n:1 →	2026.0 Yellow-breasted Apalis <i>Apalis flavida</i> avibase-E70F9747
AviList taxonomy decision Taxon flavocincta (polytypic) is retained as a subspecies of <i>Apalis flavida</i> pending further research. Proposed differences in habitat, plumage, and vocalizations are not sufficient to warrant a split in this geographically variable complex; the possibility of intergradation between flavocincta and adjacent forms also requires investigation (Ash & Atkins 2009).		
2019.1 Black-headed Apalis <i>Apalis melanocephala (race nigrodorsalis)</i> avibase-4FE76868	1:1 →	2026.0 Black-headed Apalis <i>Apalis melanocephala</i> avibase-4FE76868

---	--	--

AviList taxonomy decision

Five species are recognized in the *Cecropis daurica* complex based on a combination of plumage, vocalizations, and evidence from mitochondrial (Sheldon et al. 2005) and genomic DNA data (Brown 2019; Schield et al. 2024): monotypic *C. hyperythra* based on plumage and vocalizations; monotypic *C. badia* based on plumage, size, and parapatry with populations of *daurica*; polytypic *C. daurica* involving a merger of most populations of temperate-migratory *daurica* and tropical Asian *striolata* based on clinality in plumage and genetic parapatry; monotypic *C. rufula* based on plumage, genetics, and a zone of parapatry with populations of *C. daurica*; and polytypic *C. melanocrissus* based on plumage and genetics. A comprehensive review of this complex integrating formal bioacoustic analyses, broad genomic sampling, and phenotypic variation, is desirable.

2019.1 <i>None listed</i>	New Pending EARC →	2026.0 Yellow-eyed Bristlebill <i>Bleda ugandae</i> avibase-1D9175EA
AviList taxonomy decision Taxon ugandae is treated as a species separate from Bleda notatus based on a combination of mitochondrial-dominated DNA data (Huntley & Voelker 2016), plumage, morphometrics, and vocal differences.		
2019.1 Mountain Greenbul <i>Arizelocichla nigriceps</i> avibase-54A902B5 Olive-breasted Mountain Greenbul <i>Arizelocichla (nigriceps) kikuyuensis</i> avibase-1EEE86B8 Eastern Mountain Greenbul <i>Arizelocichla nigriceps nigriceps</i> avibase-FC523946	n:n →	2026.0 Kikuyu Mountain Greenbul <i>Arizelocichla kikuyuensis</i> avibase-1EEE86B8 Black-headed Mountain Greenbul <i>Arizelocichla nigriceps</i> avibase-FC523946
AviList taxonomy decision Taxon kikuyuensis is treated as a species separate from Arizelocichla nigriceps based on plumage, vocalizations, and genetics. Although plumage differences are obvious, information from mitochondrial DNA (Shakya & Sheldon 2017; De Santis et al. 2018) is restricted to short fragments, and formal bioacoustic analyses are lacking; further research would be informative.		
2019.1 Stripe-cheeked Greenbul <i>Arizelocichla milanjensis</i> avibase-4996833A	1:1 →	2026.0 Olive-headed Greenbul <i>Arizelocichla striifacies</i> avibase-9A80B57C
AviList taxonomy decision		

Taxon *striifacies* (polytypic, including *olivaceiceps*) is treated as a species separate from *Arizelocichla milanjensis* based on available evidence. Sometimes split into 3 species (*A. milanjensis*, *A. striifacies* and *A. olivaceiceps*) but plumage differences support a 2-species treatment with *milanjensis*, the most distinctive taxon, separated at the species level. Genetic data are fragmentary but mitochondrial DNA (Shakya & Sheldon 2017) supports separation of *striifacies* from *milanjensis*. Nevertheless, a comprehensive genetic study and investigation of contact zones is needed to confirm species limits in this group.

avibase-7471E71D

1:1

2026.0
Red-billed Oxpecker *Buphagus erythroryncha*
avibase-7471E71D

AviList taxonomy decision

The original spelling was *Tanagra erythroryncha*, but the species was soon moved into the genus *Buphagus*, and many modern sources have emended the original spelling to "erythrorhynchus" (with an -rh). In 2023, by some measures, the usage of the -rh spelling was roughly an order of magnitude higher than the usage of the original -r spelling, but by other measures, it was only ~4 times higher, which is not considered as a prevailing usage by most practitioners, hence arguing in favor of the retention of the original -r spelling. Additionally, *erythroryncha* is not an adjective but a poorly formed noun, and its ending can therefore not be adjusted according to the gender of the genus. Therefore, the original spelling "erythroryncha" is retained.

Rhabdornis, Starlings, and Mynas Sturnidae

avibase-1350773F

AviList taxonomy decision

Taxon *sharpii* is placed in the monospecific genus *Pholia* and taxon *femoralis* is placed in a monospecific *Arizelopsar* based on morphology and genetics. Sometimes placed in *Poeoptera*, but mitochondrial DNA divergences among these three genera are relatively deep (Lovette & Rubenstein 2007).

2019.1 None listed	New Pending EARC →	2026.0 Yellow-breasted Forest Robin <i>Stiphrornis mabirae</i> avibase-2455B82B
AviList taxonomy decision Taxa pyrrholaemus (monotypic) and mabirae (polytypic, including sanghensis) are treated as species separate from Stiphrornis erythrothorax (polytypic, including gabonensis, dahomeyensis, inexpectatus, and xanthogaster) based on plumage and genetics (Beresford & Cracraft 1999; Schmidt et al. 2008; Voelker et al. 2013, 2017). Sometimes treated as five species, mitochondrial-dominated DNA data have revealed three deeply diverged lineages within this complex (Voelker et al. 2017) consistent with a 3-species treatment. Further bioacoustic and genetic research is needed to better define distributional and taxonomic limits within this complex.

AviList taxonomy decision Taxon polioptera (polytypic) is placed in Sheppardia based on genetics (Beresford 2003; Sangster et al. 2010; Zhao et al. 2023). Although previously placed in Cossypha, multilocus data (Zhao et al. 2023) provide strong support for this alternative placement.		
2019.1 Irania <i>Irania gutturalis</i> avibase-73BD4B29	1:1	2026.0 White-throated Robin <i>Irania gutturalis</i> avibase-73BD4B29
2019.1 Semi-collared Flycatcher <i>Ficedula semitorquata</i> avibase-BE56C141	1:1	2026.0 Semicollared Flycatcher <i>Ficedula semitorquata</i> avibase-BE56C141
2019.1 Pied Flycatcher <i>Ficedula hypoleuca</i> avibase-6E352E18	1:1	2026.0 European Pied Flycatcher <i>Ficedula hypoleuca</i> avibase-6E352E18
AviList taxonomy decision Taxon speculigera is treated as a monotypic species separate from Ficedula hypoleuca (polytypic) based on phenotypic and genetic (Sætre et al. 2001a, 2001b) evidence, including genomic data (Nater et al. 2015).		
2019.1 None listed	New Pending EARC	2026.0 Siberian Stonechat <i>Saxicola maurus</i> avibase-3380CFC5
AviList taxonomy decision 2025-0171)) Taxon stejnegeri is treated as conspecific with Saxicola maurus pending further research. Although mitochondrial DNA data (Zink et al. 2009; Illera et al. 2008) indicate the presence of deep divergences within the Asian stonechats, not all taxa have been sampled. Furthermore, unsampled taxa have senior scientific names and may be closely related to stejnegeri; consequently, the split of stejnegeri is considered premature; genomic data required. 2025-0172)) Saxicola torquatus is treated as three species based on available evidence: S. maurus (Asian stonechats, polytypic); S. torquatus (African stonechats, polytypic); and S. rubicola (European stonechats, polytypic). Genomic (Van Doren et al. 2017) and mitochondrial DNA data (Zink et al. 2009; Illera et al. 2008) do not recover S. torquatus sensu lato as monophyletic, with S. dacotiae embedded within it. A more comprehensive taxonomic review of this complex is required given the ecological and phenotypic similarities among these species.		
2019.1 Common Stonechat <i>Saxicola torquatus</i> avibase-CF2E9674	1:1	2026.0 African Stonechat <i>Saxicola torquatus</i> avibase-CF2E9674
AviList taxonomy decision 2025-0170)) Taxon sibilla is treated as conspecific with Saxicola torquatus (polytypic) pending further research. Mitochondrial DNA data (Woog et al. 2008) revealed a relatively deep divergence between sibilla and S. t. axillaris, but taxon sampling is incomplete, and historical introgression has not been ruled out; a comprehensive genetic review based on genomic DNA is required. 2025-0172)) Saxicola torquatus is treated as three species based on available evidence: S. maurus (Asian stonechats, polytypic); S. torquatus (African stonechats, polytypic); and S. rubicola (European stonechats, polytypic). Genomic (Van Doren et al. 2017) and mitochondrial DNA data (Zink et al. 2009; Illera et al. 2008) do not recover S. torquatus sensu lato as monophyletic, with S. dacotiae embedded within it. A more comprehensive taxonomic review of this complex is required given the ecological and phenotypic similarities among these species.

2019.1 Northern Anteater Chat <i>Myrmecocichla aethiops</i> avibase-E09F7223	1:1 →	2026.0 Anteater Chat <i>Myrmecocichla aethiops</i> avibase-E09F7223
2019.1 <i>None listed</i>	New →	2026.0 Arnot's Chat <i>Myrmecocichla arnotti</i> avibase-535524BE
AviList taxonomy decision Taxon collaris (monotypic) is treated as a subspecies of <i>Myrmecocichla arnotti</i> (polytypic) pending further research. Although mitochondrial DNA data (Glen et al. 2011) indicate a modest divergence, geographic sampling is limited. Additional data are needed to support a split.		
2019.1 Black-eared Wheatear <i>Oenanthe hispanica</i> avibase-DF26171F	1:1 →	2026.0 Eastern Black-eared Wheatear <i>Oenanthe melanoleuca</i> avibase-DF26171F
AviList taxonomy decision Taxon melanoleuca (monotypic) is treated as a species separate from <i>Oenanthe hispanica</i> (monotypic) based on genetics (Aliabadian et al. 2012; Kakhki et al. 2018; Schweizer et al. 2019a, b; Zhao et al. 2023).		
2019.1 Heuglin's Wheatear <i>Oenanthe heuglini</i> avibase-6ADB636C	1:1 →	2026.0 Heuglin's Wheatear <i>Oenanthe heuglinii</i> avibase-6ADB636C
AviList taxonomy decision 2025-0161)) Taxon frenata is treated as a monotypic species separate from <i>Oenanthe bottae</i> (monotypic) based on modest plumage differences. Forming a complex with <i>O. heuglinii</i> and <i>O. isabellina</i> (Zhao et al. 2023), plumage differences among African species are relatively weak and mitochondrial DNA divergence is modest (Zhao et al. 2023). Although genetic data for <i>O. bottae</i> are lacking, its plumage is considered the most distinct, prompting recognition of <i>frenata</i> as a separate species. Further research is needed and may result in a taxonomic revision of this complex. 2025-N030)) The earliest mention of the name has the spelling heuglinii, attributed to a work by von Heuglin (1869: 346-7), wherein the latter author credited Hartlaub & Finsch for the description.		
2019.1 Familiar (Red-tailed) Chat <i>Oenanthe familiaris</i> avibase-CD8DEBE3	1:1 →	2026.0 Familiar Chat <i>Oenanthe familiaris</i> avibase-CD8DEBE3

Spiderhunters and Sunbirds Nectariniidae		
2019.1 Grey-chinned Sunbird <i>Anthreptes rectirostris</i> avibase-71EF2ACB	1:1 →	2026.0 Grey-chinned Sunbird <i>Anthreptes tephrolaemus</i> avibase-35A2CCDF
AviList taxonomy decision Taxon tephrolaemus is treated as a species separate from <i>Anthreptes rectirostris</i> based on abrupt differences in male plumage across a well-documented zoogeographical barrier, supported by vocalizations (Dowsett-Lemaire & Dowsett 2014). Genetic data would be informative.		
2019.1 Collared Sunbird <i>Anthodiaeta collaris</i> avibase-1611F295	1:1 →	2026.0 Collared Sunbird <i>Hedydipna collaris</i> avibase-1611F295

2019.1 Pygmy Sunbird <i>Hedydipna platyura</i> avibase-B0E7740F	1:1 →	2026.0 Pygmy Sunbird <i>Hedydipna platura</i> avibase-B0E7740F
2019.1 Amani Sunbird <i>Anthodiaeta pallidigaster</i> avibase-0B4F3AA2	1:1 →	2026.0 Amani Sunbird <i>Hedydipna pallidigaster</i> avibase-0B4F3AA2
2019.1 Mouse-coloured Sunbird <i>Cyanomitra veroxii</i> avibase-C1CBA33A	1:1 →	2026.0 Grey Sunbird <i>Cyanomitra veroxii</i> avibase-C1CBA33A
AviList taxonomy decision Use of "veroxii" is the correct original spelling and clearly represents an unusual but intended Latinization of the genitive of the name "Verreaux". Any other spelling is an unjustified emendation.		
2019.1 Golden-winged Sunbird <i>Drepanorhynchus reichenowi</i> (<i>race lathburyi</i>) avibase-D33D2F6D	1:1 →	2026.0 Golden-winged Sunbird <i>Drepanorhynchus reichenowi</i> avibase-D33D2F6D
2019.1 Beautiful Sunbird <i>Cinnyris pulchellus</i> avibase-00D5E1C6	1:n →	2026.0 Beautiful Sunbird <i>Cinnyris pulchellus</i> avibase-718A3B70 Gorgeous Sunbird <i>Cinnyris melanogastrus</i> avibase-375BAF53
AviList taxonomy decision Taxon melanogastrus is treated as a species separate from Cinnyris pulchellus based on an abrupt transition in male plumage (belly color), the absence of intermediate phenotypes, and apparent vocal differences (Boesman 2016m). However, a formal bioacoustic analysis, and evidence from genetics or behavior, would be informative.		
2019.1 Shining Sunbird <i>Cinnyris habessinicus</i> avibase-C6D0CB7E	1:1 →	2026.0 Abyssinian Sunbird <i>Cinnyris habessinicus</i> avibase-688582BF
AviList taxonomy decision Taxon hellmayri (polytypic, including kinneari) is treated as a species separate from Cinnyris habessinicus based on differences in male and female plumages, larger size, and reportedly different vocalizations (Shirihai & Svensson 2018). Formal bioacoustic and genetic analyses would be informative.

2019.1 Red-collared Widowbird <i>Euplectes ardens</i> avibase-26618AA1	1:n →	2026.0 Red-cowled Widowbird <i>Euplectes laticauda</i> avibase-6A1F6033 Red-collared Widowbird <i>Euplectes ardens</i> avibase-26618AA1
AviList taxonomy decision Taxon laticauda (polytypic, including suahelicus) is split from Euplectes ardens (monotypic) based on differences in plumage, molts, and tail length. A genetic analysis dominated by mitochondrial DNA data places E. l. suahelicus as a divergent sister lineage to E. ardens (Prager et al. 2008) in support of this treatment; as nominate E. laticauda was not included in the analysis, further genetic work is desirable.		
2019.1 Long-tailed Widowbird <i>Euplectes progne (race delamerei)</i> avibase-3153FE22	1:1 →	2026.0 Long-tailed Widowbird <i>Euplectes progne</i> avibase-3153FE22
2019.1 Red-headed Weaver <i>Anaplectes rubriceps</i> avibase-BE3C45B5	1:n →	2026.0 Red Weaver <i>Anaplectes jubaensis</i> avibase-ECE36984 Red-headed Weaver <i>Anaplectes rubriceps</i> avibase-4D19099B

AviList taxonomy decision

Taxon jubaensis is treated as a monotypic species separate from *Anaplectes rubriceps* (polytypic) based on plumage differences. Taxon leuconotos is retained as a subspecies of *A. rubriceps* based on plumage similarities and the presence of a broad zone of hybridization between them.

	→	

2019.1 Southern (Grey-faced) Citril <i>Crithagra (citrinelloides) hyposticta</i> avibase-C978ABCC	1:1	2026.0 Southern Citril <i>Crithagra hyposticta</i> avibase-C978ABCC
	→	

2019.1 Black-throated Seedeater <i>Crithagra atrogularis</i> avibase-D12CDD0F	1:1	2026.0 Black-throated Canary <i>Crithagra atrogularis</i> avibase-D12CDD0F
	→	

2019.1 Reichenow's Seedeater [Yellow-rumped] <i>Crithagra reichenowi</i> avibase-69EB514A	1:1	2026.0 Reichenow's Seedeater <i>Crithagra reichenowi</i> avibase-69EB514A
	→	

2019.1 Northern Grosbeak Canary <i>Crithagra donaldsoni</i> avibase-0CEB2DA6	1:1	2026.0 Northern Grosbeak-Canary <i>Crithagra donaldsoni</i> avibase-0CEB2DA6
	→	

2019.1 Southern Grosbeak Canary <i>Crithagra buchanani</i> avibase-F3618305	1:1	2026.0 Southern Grosbeak-Canary <i>Crithagra buchanani</i> avibase-F3618305
	→	

2019.1 Thick-billed Seedeater <i>Crithagra burtoni (race albifrons)</i> avibase-8E8B3DB9	1:1	2026.0 Thick-billed Seedeater <i>Crithagra burtoni</i> avibase-8E8B3DB9
	→	

Old World Buntings Emberizidae

2019.1 Golden-breasted Bunting <i>Fringillaria flaviventris</i> avibase-D1C1A026	1:1	2026.0 Golden-breasted Bunting <i>Emberiza flaviventris</i> avibase-D1C1A026
	→	

2019.1 Somali Bunting <i>Fringillaria poliopleura</i> avibase-72386016	1:1	2026.0 Somali Bunting <i>Emberiza poliopleura</i> avibase-72386016
	→	

2019.1 Brown-rumped Bunting <i>Fringillaria affinis</i> avibase-BB11EE7F	1:1	2026.0 Brown-rumped Bunting <i>Emberiza affinis</i> avibase-BB11EE7F
	→	

2019.1 Striolated Bunting <i>Fringillaria striolata</i> avibase-CDF4A106	1:1 →	2026.0 Striolated Bunting <i>Emberiza striolata</i> avibase-CDF4A106
2019.1 None listed	New →	2026.0 Gosling's Bunting <i>Emberiza goslingi</i> avibase-17E7F90B
AviList taxonomy decision Taxon septemstriata is treated as conspecific with <i>Emberiza tahapisi</i> , although its status as a valid taxon remains unresolved. The single specimen included in the genetic study of Olsson et al. (2013b) had the plumage of <i>tahapisi</i> but the mitochondrial DNA of <i>E. goslingi</i> ; further research needed.		
2019.1 Cinnamon-breasted Bunting <i>Fringillaria tahapisi</i> avibase-0C571D99	1:1 →	2026.0 Cinnamon-breasted Bunting <i>Emberiza tahapisi</i> avibase-0C571D99
